

**THE IMMEDIATE
ALTERNATIVE!
THE OBVIOUS CHOICE!**

- **Does not constrain flow. In high volume situations, more of the incoming water will pass by the filter but flow is not impeded.**
- **When flow (rain) ceases, the filter continues to work. Storm water is continuously purified.**
- **Does not require mounting or service. SweDrop is simply lowered into the drain and a simple water guide is placed under the manhole cover (supplied with each filter).**
- **After use, the whole filter is retrieved and sent to incineration. No maintenance work at the drain is required.**
- **Very low cost of labor. If the filter is exchanged in conjunction to the periodic sludge removal, the marginal effort is minimal.**
